Visualization Notes

Last modified: 2026-11-11 05:15:30 (PST)

Welcome

These notes cover how to visualize data. Each page works through one plot, with R and Python code side by side. The code runs when the site is built, so every figure comes from the data shown.

Pages

- Plotting a Binary Outcome: a rug and two histograms for a 0/1 outcome and a continuous feature.
- Choosing Colors: how far apart a palette's closest two colors are under simulated color vision deficiency.

Formats

Each page is available in these formats:

- an HTML web page;
- RevealJS slides, at the same address with `-slides` added to the page name;
- a PDF handout and a Word document.
